INTRODUCTION

The Pesticide Data Submitter List is a compilation of names and addresses (and, where available to the Agency, telephone numbers) of registrants who wish to be notified and offered compensation for use of their data. It was developed to assist pesticide applicants in fulfilling their obligation as required by sections 3(c) (1)(d) and 3(c)(2)(D) of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA), and 40 CFR part 162.9-5 regarding ownership of data used to support registration. Please note that the Agency cannot accept applications for registrations or amended registrations which did not consider the new edition of the data submitters list; this includes applications previously submitted to the Agency but not yet approved. Questions regarding this statement should be referred to the product manager.

HOW TO USE THE MICROFICHE

The listing consists of two parts: a sequential list of data submitters sorted by chemical code numbers and an index to the chemical codes arranged alphabetically by chemical name.

Since many chemical names are too long to be handled easily, the Agency has assigned a chemical code number for every active chemical ingredient. This six digit number (including zeros) appears under the heading "code number" on the left of the chemical name on fiche number 4. The user should obtain the code for a particular chemical from this list and then look in fiches 1 through 3 entitled "Pesticide Data Submitters by Chemical."

When a user has located the chemical code number of interest, there is a sequential list by company number of all companies who have submitted data concerning that particular chemical since December 31, 1969. If a chemical is omitted from the data submitters list, it is an indication that no data have been submitted for the active ingredient since December 31, 1969 or that data submitters wished to have their names withdrawn from the listing so that no correspondence would be sent to them regarding compensation. These types are described below. For each chemical for which any data submitted is listed, the listing bears one or more of the following codes: AT, C, EC, Exclusive Use, FE,FW, OT, PM,S, OR T. The codes explain the types of data involved. An explanation of these codes follows:

AT indicates that the data has submitted acute toxicity data where the substance tested was formulated end-use product rather than a technical grade or manufacturing-use product (including acute oral, dermal, inhalation, primary eye and dermal sensitization).

C indicates a common name for a chemical.

EC indicates that the data submitter has submitted environmental chemistry field studies where the substance tested was required to be the formulated end-use product rather than a technical grade or manufacturing-use product.

Exclusive Use - Where new chemicals (new active ingredients) have been registered since September 30, 1978, the listing designated the applicable data as "exclusive use data" in accordance with section 3(c)(1)(D)(i) of FIFRA. The requester must write directly to the submitter listed for written permission.

EF indicates that the data submitter has submitted efficacy data.

FW indicates that the data submitter has submitted fish and wildlife field studies, where the substance tested was required to be formulated end-use product rather than a technical grade or manufacturing-use product.

OT indicates that the data submitter has submitted other data, which may be product and residue chemistry, subacute and chronic toxicity data, acute toxicity data using a technical of manufacturing-use product, and/or other fish and wildlife and environmental chemistry studies than set forth above.

PM with a specific number indicates the product manager in the Registration Division of the Office of Pesticide Programs who is responsible for guiding the registration of that chemical. Information and assistance may be obtained by contacting that particular product manager, or mail may be addressed by product manager number to his attention.

T indicates a trade name. Compounds with T are not acceptable names to be listed on a label.

```

In addition, beginning with this edition of the list, users will find a new category under the heading "type of data." for those chemicals for which a registration standards has been published, the notations "generic data," "formulated data," or "generic and formulated" will appear. Definitions for these citations are as follows:

Generic data pertain to the properties or effects of a particular active ingredient, and thus are relevant to an evaluation of the risks of all products containing that ingredient (or all such products having a certain use pattern), regardless of any such product's unique composition or use.

Formulated data relate only to the properties or effects of a product with a particular composition (or a group of products with closely similar composition). Formulated data pertain to data that support the formulation which is marketed; it usually includes product chemistry and acute toxicology data. Under certain chemicals both individual codes (e.g., EF, OT, AT, etc.) and formulated data will appear together. This is necessary since the more recent manufacturing-use standard (MP) will not have looked at the data set for end-use products but only for manufacturing-use products.

For a list of the generic and/or formulated data, please refer to the registration standard. copies of these standards are being made available through the National Technical Information Service (NTIS), 5285 Port Royal Road, Springfield, VA 22161, telephone 703/487-4650. Prices for all microfiche copies are $4.50; paper copy prices vary with the length of the document. Please contact the Registration Support and Emergency Response Branch (at the address given below under heading "Correction of List") for a list of the lates available registration standards.
